

GRC NIS2 Readiness Track

What is a NIS2 Readiness Track

The NIS2 Directive establishes clear cybersecurity obligations for organisations across Europe. Meeting these obligations requires more than good intentions, but rather a structured approach to accurately assess your current position and define the next steps.

Easi's NIS2 Readiness Track supports your organisation throughout the entire compliance process, from scoping to helping you prepare for certification, offering clarity at every stage.

Why NIS2 compliance matter

Non-compliance can have serious consequences, including fines of up to €10 million, operational disruption and reputational damage.

The NIS2 Readiness Track ensures you are always prepared.

The Easi Approach

We do not hand you a generic checklist. Our NIS2 Readiness Track is a hands-on, end to-end assessment built around your organisation's reality.

We:

- **determine** whether you fall within the scope of NIS2 and whether you qualify as an Important or Essential entity.
- **establish** which assurance level applies to you and how many controls you need to meet.
- **assess** your organisation across all 6 CyFun categories to determine your final CyFun maturity level.
- **establish** evidence of every finding: scores, risks, quick wins and a prioritised roadmap.
- **deliver** the assessment results in a full written report and a tailored presentation.
- **provide** awareness sessions tailored to board members & C-level executives.

What is GRC?

Our Governance, Risk, and Compliance (GRC) services ensure that your organization stays ahead of the challenges posed from evolving security threats and regulatory requirements by implementing comprehensive strategies to:

manage risk
achieve compliance
protect your business
